GTEx Cerebellum: allele−specific splicing effect comparison
Sensitivity view: one representative per gene and junction role, chosen by Cerebellum p−value
Baseline (0 hr)
1 hr
6 hr
1 pair; 1 gene
Pearson r = not estimated
Expected direction: 1/1
2 pairs; 2 genes
Pearson r = not estimated
Expected direction: 2/2
3 pairs; 3 genes
Pearson r = +0.93
Expected direction: 3/3
HNRNPK C>T
ATP5MJ T>C
SNHG5 G>T
HLA−C T>C
GTEx Cerebellum beta (normalized intron usage)
isoLASER dPSI: ALT minus REF part inclusion (fraction)
Effect direction
Concordant
Permutation BH q <0.05, cis, |dPSI| >=0.10; exact variant and annotated−event matching.
All available Cerebellum matches here are inclusion junctions: same signs are expected. Repeated SNPs/genes are correlated.
