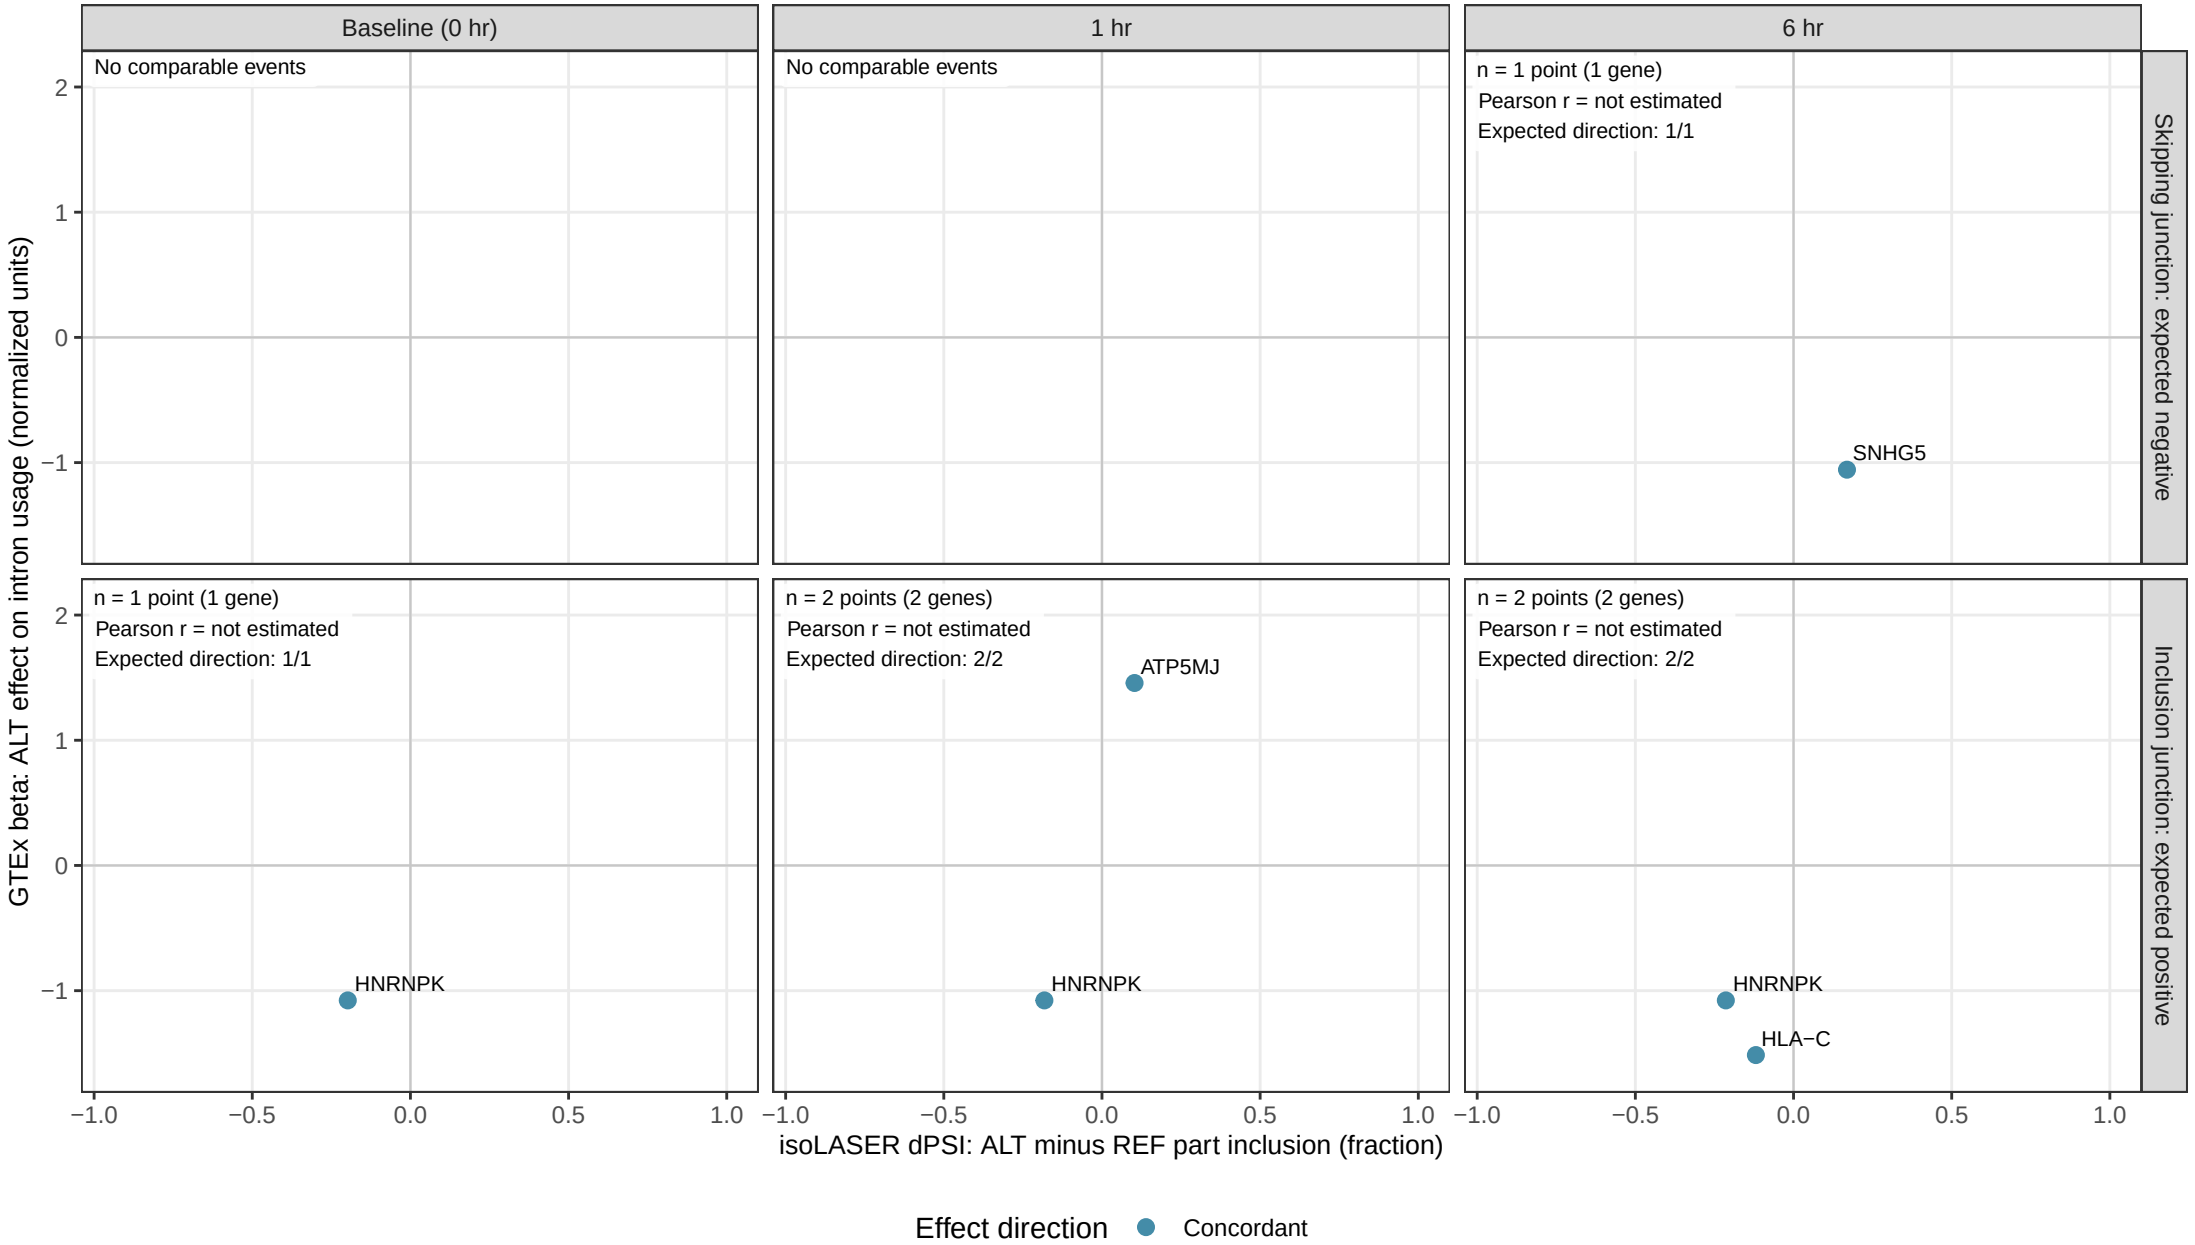
Comparison with GTEx v8 brain sQTL effect sizes

Sensitivity check: Cortex, Frontal Cortex BA9 and Anterior Cingulate Cortex BA24; one point per gene and role



Our results: permutation BH q < 0.05, cis, |dPSI| >= 0.10. GTEx: significant pairs in 3 cortical tissues.
Representative tissue/junction selected by smallest GTEx p−value, independently of our effect direction. Correlations are descriptive.
