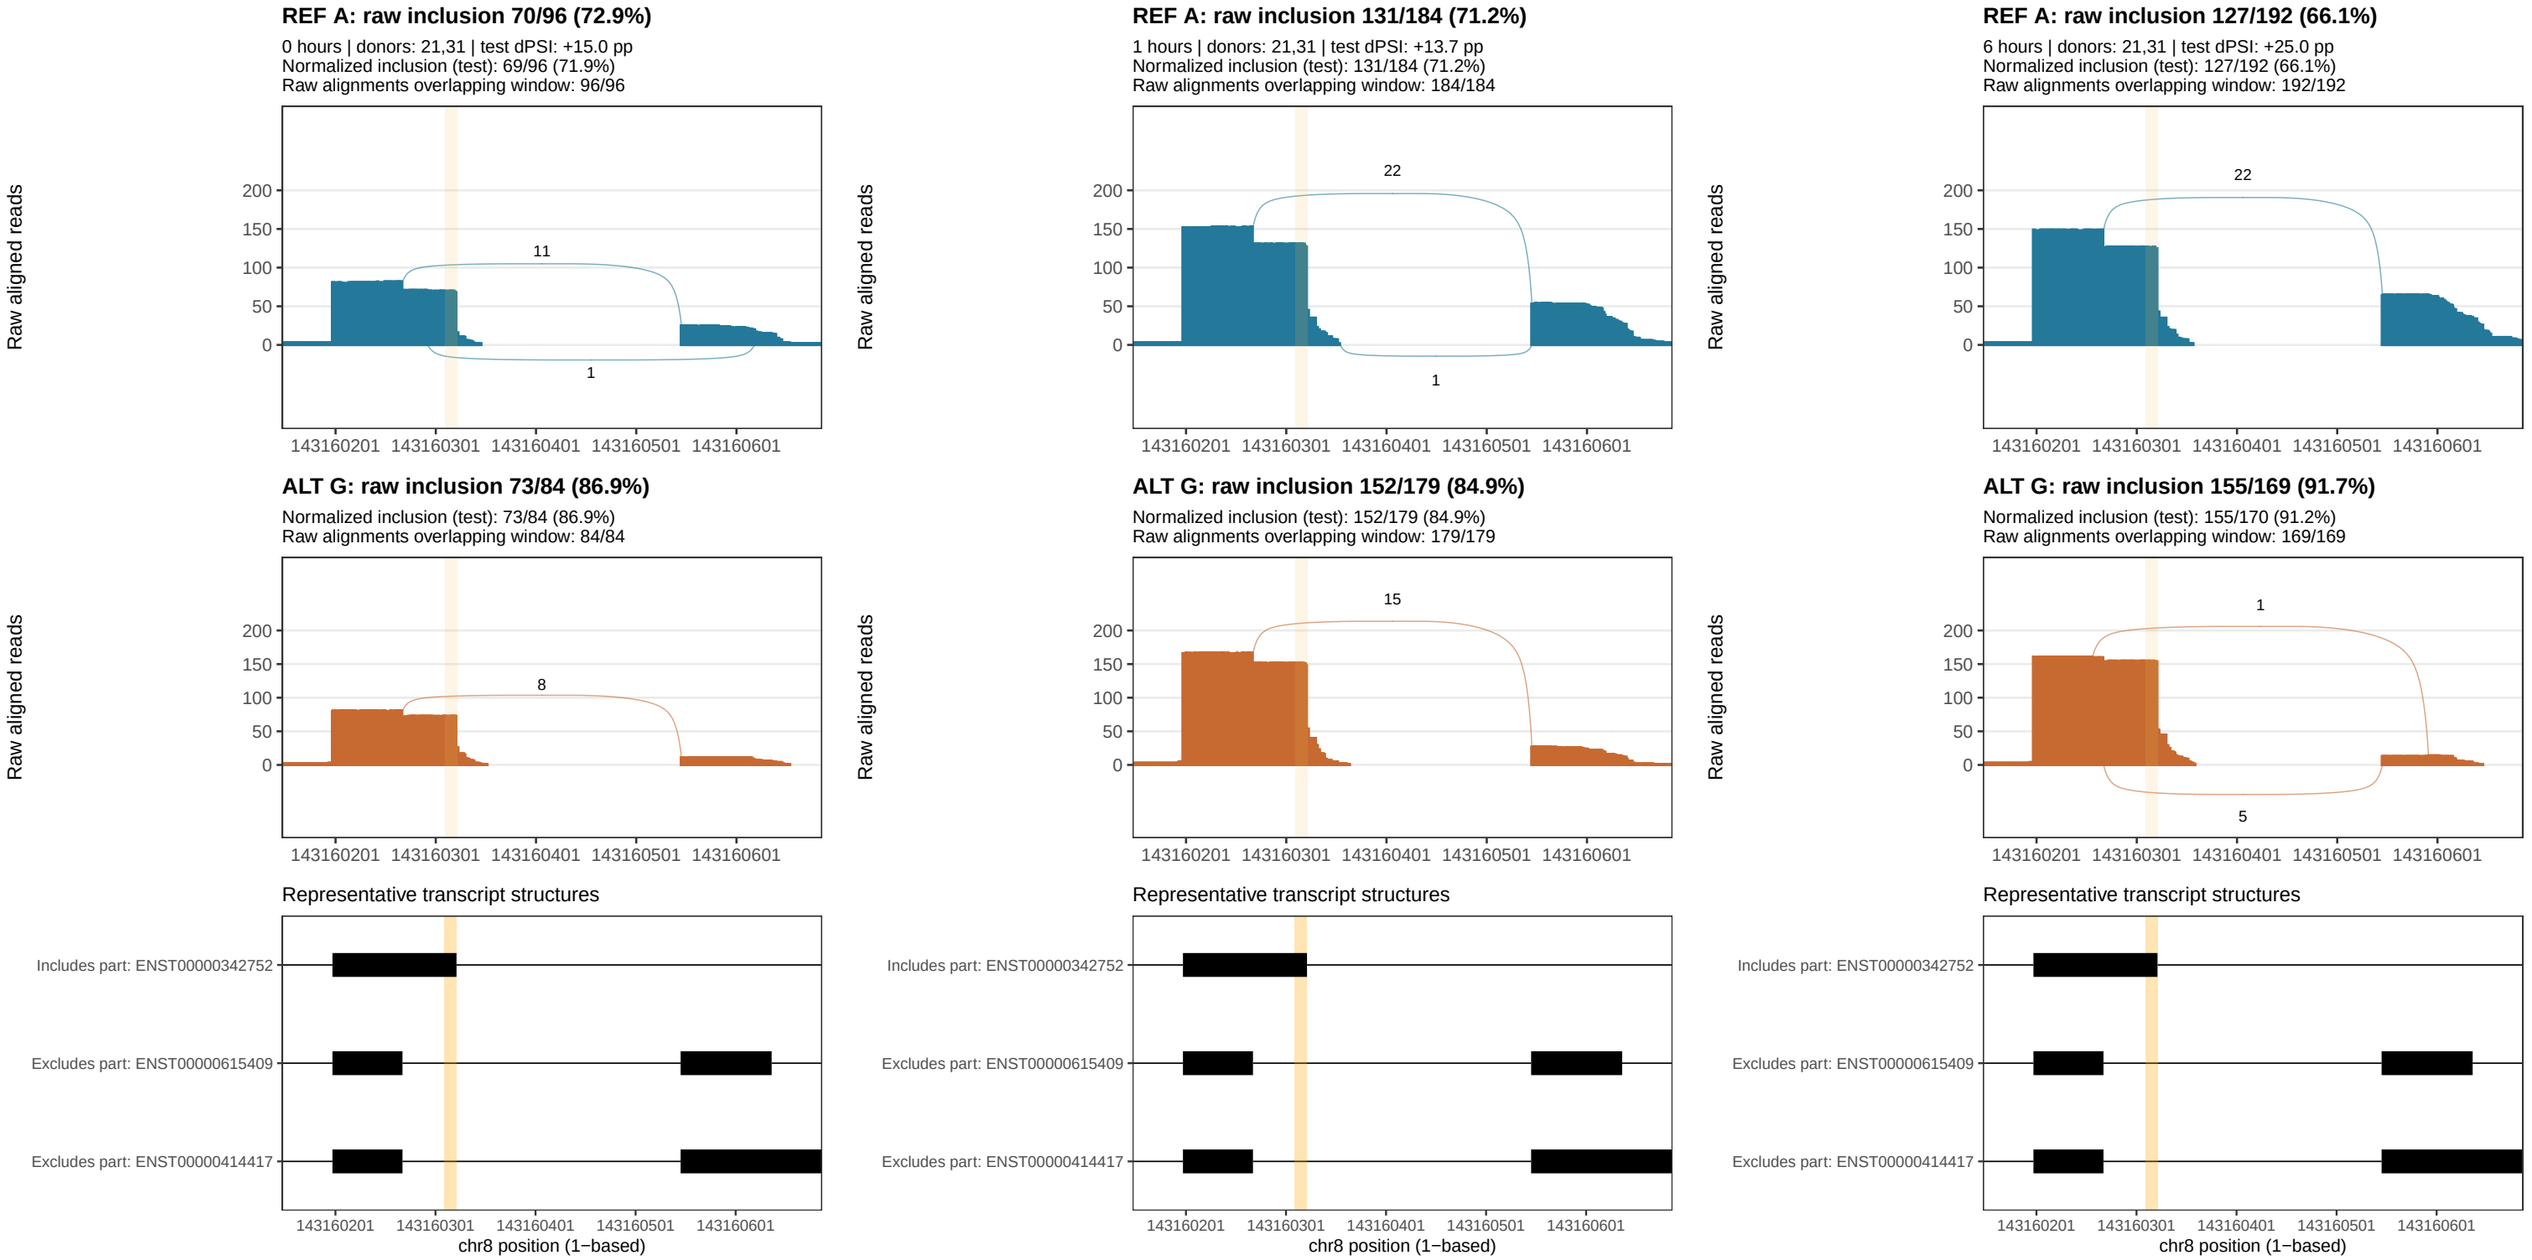
LY6H: allele−specific read alignments across stimulation

Variant chr8:143158441:A>G (isoLASER 0−based); tested part chr8:143160309−143160321:− (0−based, half−open). Yellow: tested part.



Coverage and arc labels are raw read counts; all six tracks share a y scale. Arcs: every junction with >=1 read.
Raw inclusion describes recorded reads. Normalized inclusion is from rescaled, rounded donor tables used for AMI and dPSI.
Inclusion is each read's own alignment: >= 10 aligned bases in the part, or a junction spanning it. Normalized counts are not additional sequenced reads.
