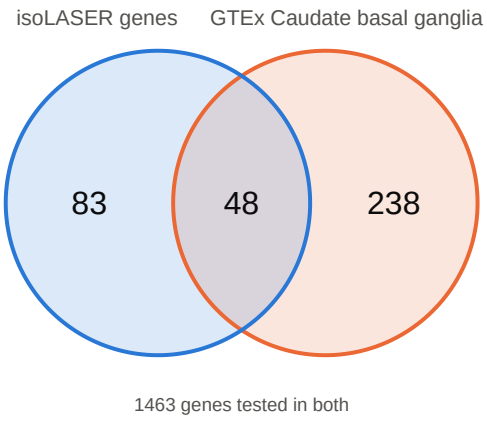
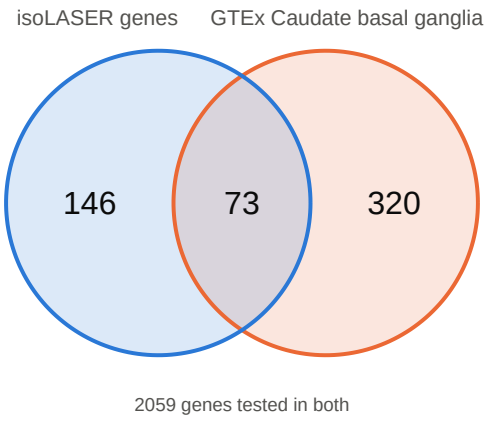
# Read−based isoLASER vs GTEx Caudate basal ganglia sGenes, by timepoint

## isoLASER cis, het donors, 0 hr



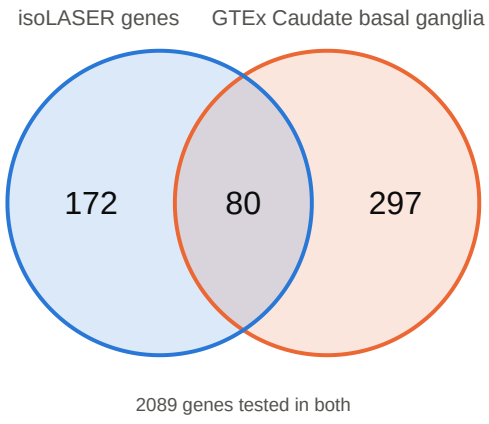
1463 genes tested in both

## isoLASER cis, het donors, 1 hr



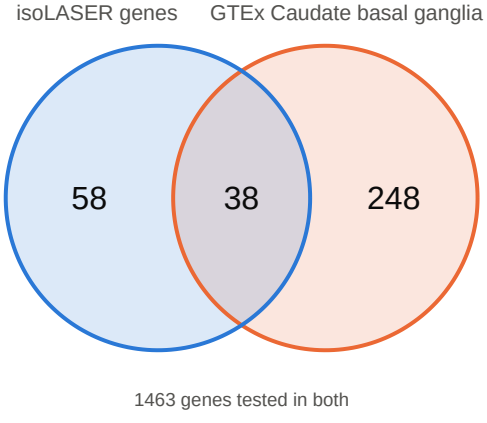
2059 genes tested in both

## isoLASER cis, het donors, 6 hr



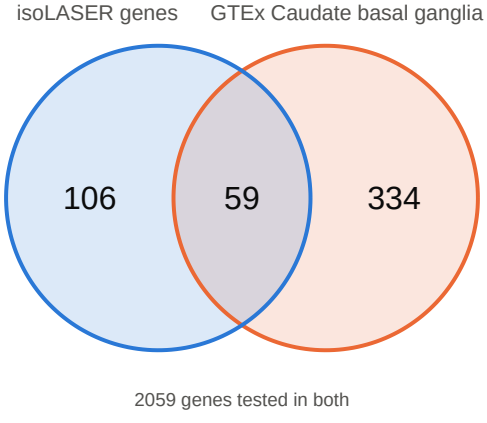
2089 genes tested in both

## Before FDR, 0 hr



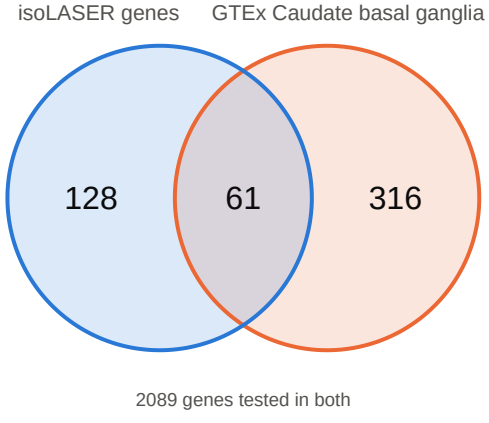
1463 genes tested in both

## Before FDR, 1 hr



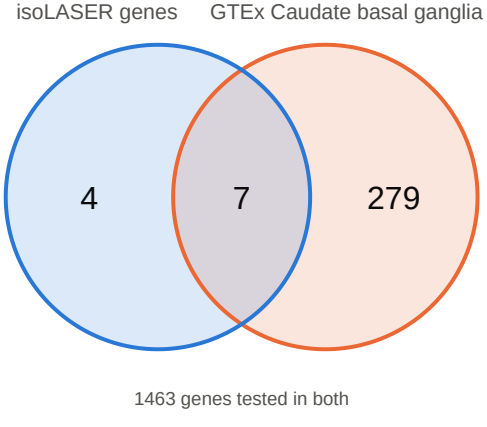
2059 genes tested in both

## Before FDR, 6 hr



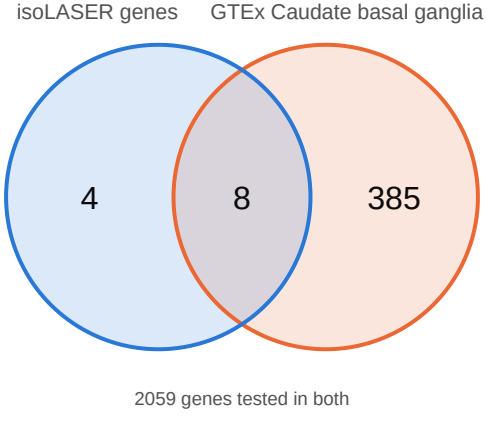
2089 genes tested in both

## After FDR, 0 hr



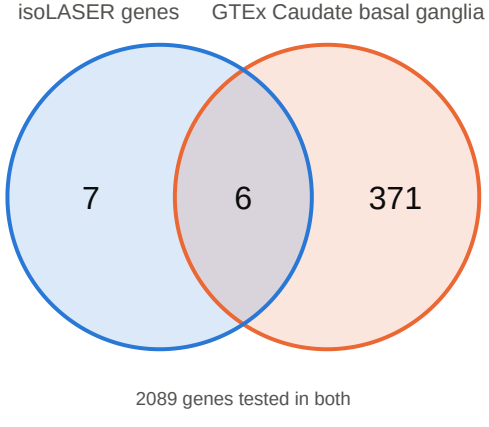
1463 genes tested in both

## After FDR, 1 hr



2059 genes tested in both

## After FDR, 6 hr



2089 genes tested in both

Each panel: one set at one timepoint, restricted to genes tested at that timepoint in our permutation run and by GTEx Caudate basal ganglia.
isoLASER genes: at least one association of the set at that timepoint. GTEx sGenes: gene−level q < 0.05, through any variant
and junction (gene level: not necessarily our SNV or event). Circles are not area−proportional.
